EXPERIENCE

Self-Employed

April 2020 to February 2025

Freelance IT Support / Consultant

- Assisted multiple clients with a variety of technical needs, ranging from recommending and managing inventory items, setting up and breaking down workstations, to troubleshooting devices such as printers and registers
- Performed ad hoc data analysis and web UI updates for non-profit organizations using Excel, Google Sheets, and WordPress to promote higher quality engagement, outreach, and security

Beacon Pointe Wealth Advisors

February 2019 to April 2020

Senior Associate, Operations & Technology

- Maintained data quality between Tamarac and Salesforce CRM, while initiating up to 50 new accounts daily, managing over \$11 billion AUM across 24,000+ active accounts
- Directed the firm's quarterly reporting process by writing and distributing documentation, auditing and reconciling account performance issues, and assisting over 160 employees across 10+ nationwide partner offices
- Compiled and presented the firm's operations activity to the team of directors using PowerBI and custom Excel workbooks, providing visual insights into managed assets and cash flow for each office, advisor, and client

Findability Sciences

October 2015 to February 2017

Analyst

- Developed and scheduled SQL queries as part of the ETL pipeline into an MS SQL Server database, performing daily QA through log reviews, data cleaning, and feature testing to meet client's evolving needs and requirements
- Illustrated donor behaviors by creating a web dashboard with Highcharts, integrating social media activity from Twitter and Facebook into a unified visualization platform, ultimately boosting donor retention by ~15%
- Applied machine learning techniques such as NLP and sentiment analysis to summarize comments and reviews on clients' social media pages, and utilized regression models and decision trees to predict donations

EDUCATION

Boston University

June 2022 to January 2024

Master of Science in Computer Science

University of Massachusetts, Amherst

September 2009 to May 2015

Bachelor of Science in Mathematics

PORTFOLIO

Murdeer

February 2025 to Present

- Submission for Bigmode Game Jam 2025 made in Unity / C# and still under active development
- Created first-person character controller, several in-game features and systems, menus & UI, and dynamic audio
- Hooked up communication between alpha build and studio website .NET backend to display players' high scores
- Consistent collaboration with a small team through weekly standup meetings and git source control

three20

July 2024 to September 2024

- 3D tabletop dice rolling simulation built with Vite, using React-three-fiber and cannon.js physics
- Prioritized UX and performance with a simple interface and asynchronous asset loading

The Dndler

January 2022 to June 2022

- Collaborated with small team to launch React & Node web application for creating Tabletop RPG characters
- Developed Express.js API to generate random characters based on user-provided options, tested with Jest
